Part 1. Do I Need Xcode on My Mac?

Xcode is a package wherein it is used to develop some tools on your Mac and iOS operating system. This actually includes several types of utilities that are actually useful and is required for a development process for applications.

Having this program installed on your Mac is just as simple as downloading it from the Mac store. But making use of the Xcode app for a long period of time can actually make gigabytes of data in your cached. The worst part of it is that it can even eat up some of your storage space even after your work is done. Some of its additional aspects can include other things like the Interface, iPhone Simulator, Quartz Composer, Dashcode, dtrace, perl, python, ruby, and so much more.

This app will also create a lot of temporary cache files and as time pass by, these files will become hidden and will take up your storage space, eventually make your Mac running slow. Also, these junks will slow your Xcode down, and worst, it will become unresponsive.

So, do you need Xcode on your Mac? Now, if this happens to your Mac, there might be a need for you to clean your Xcode by deleting some apps and all of your old caches. However, this cannot be done with just a normal process of uninstalling it.

When you are going to uninstall Xcode on Mac, it is **not as simple as dragging the icon to your Trash**. This will not uninstall your Xcode completely. Some of its cache, files, and other things associated with it will remain in your hard drive.

With this issue, there are actually several questions that you might be dealing with now:

- Is it safe to delete Xcode?
- Can I delete Xcode from my Mac?
- Can I completely uninstall the Xcode from my Mac?

The answer to these questions is really simple and it is a big YES! We have included here ways on how you can actually completely remove the Xcode app from your Mac together with all the files that are associated with this app. And doing this will actually give you more disk space for your new apps and files and it will also boost the speed performance of your Mac.

Full Solutions to uninstall Xcode on Mac including 10, 11 or other versions are as follow.

Part 3. How to Uninstall Xcode on Mac Manually

We are going to show you here that standard method on how you can remove your Xcode 10, 11 or other versions from your Mac PC.

Here are the steps that you need to take to uninstall Xcode on Mac:

1. Go to your Applications folder.
2. Drag the Xcode icon to your trash.
3. Clean up your Trash bin.

Doing this will remove the main app. Let us proceed and remove the rest of your Xcode files.

All you have to do is to follow these simple instructions. Please keep in mind that you have to follow instructions carefully for you to avoid having bad consequences:

1. Launch Finder on your Mac.
2. From the menu, go ahead and click Go.
3. After that, go ahead and go to Folder.
4. Go to ~/Library/Developer/.
5. After that, look for Developer folder.
6. Once you find that folder, delete it.

If you are actually using the **earlier version of Xcode on your Mac like the 7 or 8**, they will definitely leave some marks all over the place.

Now, for you to remove these marks or your old Xcode, proceed and do the following steps:

1. Launch Terminal on your Mac.
2. Run this access sudo: /Developer/Library/uninstall-devtools --mode=all.
3. Enter and confirm your admin password.
4. This point, the script will run on your Mac. Wait for it to finish.
5. One the script is done running, go ahead and quit the Terminal.

Now, there is just one more thing that you need to do for you to remove Xcode application cache completely from your Mac PC. In some cases, on some versions of the app, they are actually left during purging so if this is the case, you can go ahead and visit this directory.

This is for you to be assured that there are no files left:

1. Search ~/Library/Caches/com.apple.dt.Xcode file on Mac.
2. If you found out that there are some files left, you can go ahead and simply clean up the folder.

Once that you have fully removed all the traces of Xcode on your Mac PC, go ahead and reinstall the app. This time, you should be able to experience a faster experience using your Mac. You will also have more space on your Mac after you uninstall Xcode on Mac.
